

Install SPEAQ ID on your phone

SPEAQ ID is a sovereign, decentralized identity wallet for the post-password web. Sign in to participating websites and apps with one tap, without giving away your data. And use the built-in password vault for everything else.

app.speaq.id

Get SPEAQ ID on your phone **two ways, both free**

The **easiest way**: download it from the App Store or Google Play. Search for **SPEAQ ID**, install it, and open it.

DOWNLOAD ON THE
App Store

GET IT ON
Google Play

No access to the app stores? You can also install it straight from the browser. It is the same app, added to your home screen in under a minute.

iPhone & iPad Safari

- 1 Open **Safari** and go to **app.speaq.id**
- 2 Tap the **Share** button (square with an arrow up)
- 3 Scroll down and tap **Add to Home Screen**
- 4 Tap **Add**, then open SPEAQ ID from its new icon

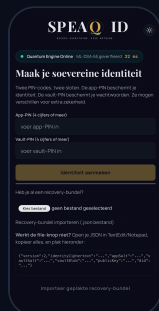

Use Safari, not Chrome, on iPhone. Add to Home Screen only appears in Safari.

Android Chrome

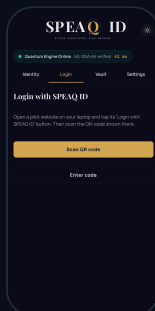

- 1 Open **Chrome** and go to **app.speaq.id**
- 2 Tap the **three-dot menu** in the top right
- 3 Tap **Install app** or **Add to Home screen**
- 4 Confirm, then open SPEAQ ID from its new icon

Whichever way you install it, on first launch you create your identity and PINs. Nothing leaves your device.

How it works

One tap to sign in

When a website or app offers SPEAQ ID sign-in, you receive a 6-digit pairing code or scan a QR code. One tap on Approve confirms the sign-in. No passwords, no email, no phone number. Your sovereign cryptographic identity does the work.

What you give away: nothing

Your identity keys, your passwords, and your two-factor codes are generated and stored locally on your device. SPEAQ never has access to any of it. Partner services receive only the cryptographic proof that you approved a specific sign-in. No tracking. No analytics. No advertising. No data selling. Ever.

Password vault included, free

For every website that does not support SPEAQ ID sign-in yet, you have a fully encrypted password vault on your device. Store traditional passwords and TOTP codes safely. The vault has its own PIN, separate from the app PIN. Unlimited entries, no subscription.

How we protect your privacy

SPEAQ ID is built on the W3C Decentralized Identifier (DID) standard. Your DID is a cryptographic identifier that you alone control. You generate it on first launch, rotate it whenever you want, and revoke it at any time. We never collect your name, email, or phone number.

Features

- Passwordless sign-in via pairing-code or QR-scan
- Encrypted password and TOTP vault, separate PIN, unlimited entries
- Recovery bundle export for safe offline backup
- Available in 9 languages
- Light and dark themes
- Post-quantum cryptography (Kyber-768 plus Dilithium-2, NIST FIPS 203 and 204)

For websites and apps

If you run a service and want to offer SPEAQ ID sign-in to your users, visit speaq.id and send us a message. Integration is free for early partners and removes the burden of password storage, reset flows, and password-related GDPR obligations.

Welcome to passwordless. Welcome to sovereign. Welcome to **SPEAQ ID**.
